

ESSILOR

SEEING THE WORLD BETTER

Essilor Manufacturing (Thailand) Company Limited

รายละเอียดโครงการโดยคร่าว

ชื่อโปรเจค (Project Name)	รายละเอียด (Description)	ภาควิชา (Faculty)
Energy (Electrical) Management Model	To analyze energy consumption, identify key parameters and machines updated energy diagram for Energy Model Creation. To link energy model with Smart electrical meter to be real time energy model and propose energy saving projects.	Electrical Engineering
Study/Make machine prototype	Study of process and/or machine mechanism (i.e. effect of clamping position and shape, process parameters), Polishing water recycling, Bisperometer, etc.	Mechanical engineering
DK (distribution key) investigation	To increase a reliability of information in the Essilor Internal system by analyzing customers usage characteristic and correcting data in DKP application to be align with customer usage characteristic.	Industrial Engineering
KPI analysis Tool	To consolidate, monitor and analyse performance of each plant to align with the targeted KPI.	Industrial Engineering
Segregation of Duties	Project to develop tool or application to audit, manage and ensure the Segregation of Duties, at level of security and efficiency.	Information Technology (IT) related
Master Data Request Application	Project of developing a web application for user among Asian subsidiaries to submit the request of Master Data setup and Update. As well the application will be a tool to store and retrieve those Master Data inputs for further analysis and reporting when a need.	Information Technology (IT) related
Training Package Animation (e-Learning) for IT Newcomer	To build animation to gather and animate the training and technical that is required for the new programmer and new tester.	Information Technology (IT) related
Continuous Software Development Standardization	Standardize an internal process of continuous software (web applications) development and implementation (from Requirement defining -> Coding -> Integration -> Delivery -> Testing -> and Deploying on cloud environment	Information Technology (IT) related
Data Testing Process Tool	Working with Data Project Manager, in order to process the implementation of testing use case and testing process (NRT,...) for the new Data Admin tool which this tool is managing product & process data.	Information Technology Computer Science Computer Engineering
DECIDE Software Development	To improve existing application using for lens inspection in production where lenses are made to order. Main task is to develop the application to support new configuration evolution by using "Object Oriented Programming (OOP)" concept.	Computer Science Computer Engineering
